

Compact Windshield Phone Mount

The HyperGear Compact Windshield Phone Mount makes mounting and dismounting your phone in the car the easiest it's ever been. The secret is in the cradle – squeeze the arms together to lock them into place, and press the Easy Release button to grab your phone and go. It really is that quick. The cradle and its arms are foam-padded to form a tight grip around any phone—large or small, cased or caseless—while leaving the screen completely unobstructed. Attach the mount to your windshield and swivel the cradle to any angle and orientation, so you can keep your navigation, conversations, and playlist control secured at eye level while you drive.
